Cheoah Lake was formed with the construction of Cheoah Dam in 1919. The lake consists of 644 acres along its 9.5 mile run. Cheoah Dam was the location of Harrison Ford's jump in the 1993 movie *The Fugitive* and has become known as Fugitive Dam. At the time of the dam's completion it was the world's highest overflow dam (225') and its turbines were the largest in the world.

Fish include lake and brook trout, bass, crappie and bluegill.
